PET FELT

the perfect material to apply on walls, furniture and ceilings for a better sound environment

- recycled PET bottles

- durable

- sound absorbing

- recyclable

- easy to clean

- fire retardant

PET felt is made from recycled plastic bottles. It comes to factory as fibre. This fibre material must be blended and mixed extremely carefully to ensure that every square metre of felt has exactly the same properties.

PET Felt Acoustic Panels are large sturdy sheets, yet soft to touch. The panels can be used in many scenarios such as wall and ceiling covering, in room dividers or custom installations.
